

OBU 2.0

Software version

We're there to help.

In addition to maximum convenience, the On-Board Unit with the OBU 2.0 software also offers improved functionality. Only with the version OBU 2.0 software can the toll rates and route information be transmitted wirelessly via mobile radio signals. This enables the OBU to automatically receive information regarding

- new motorway junctions,
- additional routes or
- changed toll rates,

without requiring additional visits to the workshop.

If you have a question and are a registered user - give us a call. Please refer to your registration documentation for the service centre telephone number.

If you have a question and you have not yet registered - our staff in the call centre will be happy to help you in German, English, French or Polish under +49 (0) 180 2 865526*

First come, drives best.

The version
OBU 2.0
software has arrived
The update for your OBU.

Update now: The version OBU 2.0 software sets new standards.

The German truck toll system started on 1st January. The On-Board Unit system is the most convenient log-on method available to you as a user. As announced last year, the new standard with the new version OBU 2.0 software will apply as scheduled from 2006. This will render the toll system even more flexible.

Take advantage of the early opportunity to have the software updated on your On-Board Unit at a service partner workshop now. Only so will you be able to continue making use of automatic log-on in the coming year– and have the additional chance to win exclusive VIP tickets to Europe's most spectacular truck race.

Version OBU 2.0 software – the procedure:

- The version OBU 2.0 software is now available to you.
- The new software has undergone comprehensive practical testing and has been judged fully fit for service by an officially-appointed assessor.
- The OBU 2.0 update will be available as scheduled. The necessity of the update was already announced to you last year.
- All service partner workshops will be pleased to perform the version OBU 2.0 software update for you. The updating process takes approximately one hour. The OBU need not be removed.
- Toll Collect will assume payment of the Service Partner for the update.
- Act now: The earlier, the better. So update as soon as possible. Have the new software installed the next time your vehicle is in the workshop or make an appointment now.
- That way, you will avoid possible bottlenecks in the service partner workshops at the end of the year and ensure smooth running of your business processes.

Secure your chances: Update soon and then set off to the biggest European truck races.

Welcome to the greatest race tracks in Europe! Big vehicles, powerful engines, mega-action – and you in the middle of it all as Toll Collect's guest of honour. With a bit of luck, you could be there (hotel accommodation and travel included) when the high-power trucks compete on Europe's most famous race tracks.

Here's how:

From all the users who have their On-Board Unit updated with the new version 2.0 software by 31st August 2005, we will raffle the prize of a weekend in the Spanish sun with exclusive VIP tickets for the truck race in Jarama on 1st and 2nd October.

Further fantastic opportunities to win await all those who get their update from 1st to 30th September. They will have the chance to win exclusive VIP tickets to the truck race at Le Mans in France from 22nd to 23rd October.

Users who have the update performed in the period from 1st October to 31st October might strike it luck and experience the annual Truck Grand Prix at the Nürburgring in Germany in July 2006.

So: Update soon and secure a winning chance.
