

Code of Practice on Access to Upstream Oil and Gas Infrastructure on the UK Continental Shelf

Provision of Information

Name of Infrastructure:	CLIPPER & No4 Sealine	Date:	December-05
--------------------------------	-----------------------	--------------	-------------

The data should be to a sufficient level and time horizon to enable prospective users to determine whether or not the infrastructure has the potential to meet their transportation and processing requirements.

Entry Specification (Typical)	GSV 37-44.5MJ/sm ³ , Oxygen <0.2%, CO ₂ Max 2 mol%, H ₂ S <3.3ppm, Total Sulphur <15ppm, WI 48-51.5 MJ/Sm ³ , Inerts <7%, N ₂ <5%
Outline details of primary separation processing facilities	Two Stage Compression Station with Fiscal Metering. Export Pipeline to Shell Bacton Gas Plant
Outline details of gas treatment facilities	Gas Compression

As a minimum, and by way of an example, this basic capacity information could be equivalent to each infrastructure section being portrayed through consistent colour coded 'traffic lights' that reflect thresholds of availability over at least the next 5 ye

Traffic Light' Colour	Ullage as % of system capacity
Red	<5%
Amber	5% to <25%
Green	> 25%

If interruptible capacity can be made available over and above the firm capacity, the extent and timing availability of such interruptible capacity should be stated (eg. for calendar years 2004 to 2006, 100 MMscfd interruptible capacity in summer, 20 MMsc

	Capacity (include units)	Ullage as % of system capacity					Comments (if any)
		2006	2007	2008	2009	2010	
Gas export capacity	725 MMScf/day						Interruptable 250MMscf/day capacity in Summer
Gas compression capacity	525 MMscfd						Interruptable 100MMscf/day capacity in Summer

Disclaimer: All the above information is provided by Shell U.K. Limited (for itself, and other Shell group companies including Enterprise Oil U.K. Limited);
